Att: Mr. Roger Heldman

Re: Core Analysis Report  
Keener Sandstone Formation (1955.5'-1966.5')  
Big Injun Sandstone Formation (1966.5'-1994.5')  
Squaw Sandstone Formation (2026'-2042.75')  
J. B. Casto No. 120 Well  
Granny's Creek Field  
Clay County, W. Va.

Gentlemen:

Diamond cores from this well between the depths of 1954 feet and 2043 feet have been received in our Michigan laboratory. Results of the following requested analyses are herein submitted:

1. Grain density and whole core porosity.
2. Whole core permeability and 90° whole core permeability on 3' intervals. Plug permeability to be measured in same directions as whole core permeability.
3. Vertical whole core permeability determinations on 2' intervals.
4. Horizontal plug permeability on 1' intervals of the core. All plug samples are to be taken from the center of the core.
5. 90° plug permeability on 1' intervals of the core.
6. Fluid saturations on 1' intervals.

The cores from this well are being returned to your offices via motor freight. The opportunity to be of service on this well is appreciated and please call if you have any questions.

Very truly yours,

CORE LABORATORIES, INC.

Mabre Maness
